SUMMARY

Technical Project Manager experienced in managing electrical and hardware projects across engineering, procurement, and manufacturing teams. Improved on-time delivery by up to 18% through structured planning, risk management, cross-functional coordination, and stakeholder communication, along with electrical and semiconductor product development from concept through engineering release and manufacturing.

TECHNICAL SKILLS

- Project Management Methodologies:** Agile/Scrum, Waterfall, Lean Six Sigma, New Product Introduction (NPI), Product Development & Release (PDR), Continuous Improvement
- Program & Risk Management:** Risk & Dependency Management, Cross-Functional Management, Status Reporting & Governance
- Electrical & Semiconductor Engineering:** Electrical & Electronics Engineering, Semiconductor Technology, Electronic Circuits, PCB Design, Power Electronics, Manufacturing Processes, Quality Control, Embedded Systems
- PM Tools & Platforms:** MS Project, JIRA, Confluence, Office Timeline, Smartsheet, SharePoint, Primavera P6
- Data & Analytics:** Power BI, Excel, SQL, Data-Driven Decision-Making

PROFESSIONAL EXPERIENCE

Project Manager | Maxgen Technologies Pvt Ltd., India

Nov 2021 - Dec 2023

- Led project schedules and deliverables for electrical systems and PCB design projects across 3+ concurrent workstreams and multiple clients, improving on-time milestone completion by 18%.
- Tracked project risks, dependencies, and action items across circuit design, embedded systems development, and hardware testing phases using structured status trackers and risk registers, reducing schedule slippage by 12% through active follow-up.
- Facilitated stakeholder meetings with electrical engineering and client teams covering schematic reviews and hardware validation status, preparing status reports for leadership that improved visibility into project progress and decision-making turnaround by 20%.
- Supported resource planning and task allocation across electrical design, layout, and testing teams, reducing delays by 14%.
- Managed budget monitoring and project timelines across electrical hardware procurement, component sourcing, and engineering milestones including schematic design and hardware validation helping maintain project spend within 8% of allocated budget.
- Coordinated BOM management, ECR/ECN workflows, and DFM/DFA reviews across electrical projects, tracking component substitutions, part-number revisions, power requirements, electrical specifications, and design configuration to support controlled engineering-to-production transitions.

Project Manager (Volunteer) - VP | Street Cause Organization, Hyderabad, India

Jan 2021 - Oct 2021

- Coordinated multi-location operational programs with cross-functional teams, improving delivery timelines by 15%.
- Enforced quality and schedule adherence standards, reducing material defects by 10% through process controls.
- Applied Lean Six Sigma principles to streamline workflows, increasing operational efficiency across volunteer-led programs.
- Facilitated communication and alignment across volunteer teams and organizational stakeholders to support program execution.

EDUCATION

M.S. in Engineering and Technology Management/Industrial Management

Jan 2024 - Mar 2026

Portland State University, Portland, OR

GPA: 3.8/4.0

B. Tech in Electrical and Electronics Engineering

Aug 2019 - Jul 2023

Vasavi College of Engineering, India

GPA: 3.5/4.0

KEY PROJECTS

Tesla Gigafactory Site Selection - Engineering Economics Analysis

Managed a \$143,000 evaluation budget to build a data-driven site selection framework for Tesla's Gigafactory expansion, analyzing construction and energy infrastructure costs and logistics across candidate sites. Built a Work Breakdown Structure to organize evaluation phases, applied Agile planning practices to adapt resource allocation across evaluation sprints, and tracked deliverables and milestones in Jira.

Two-Output Soft-Switched DC-DC Converter for LED Lighting Applications

Designed a two-output, full-bridge DC-DC converter with LC resonant Zero Voltage Switching (ZVS) to reduce switching losses and independently regulate two LED loads via dual rectifier stages and coordinated PWM control. Validated through PSPICE simulation and hardware prototyping, confirming stable dual-output performance under varying loads.

Temperature Monitoring System using Raspberry Pi & Custom PCB

Designed a real-time embedded temperature monitoring system using Raspberry Pi 4 and a custom KiCad PCB, integrating DS18B20/LM35 sensors with regulated power delivery and GPIO interfacing. Built a Python pipeline for live data acquisition, CSV logging, and threshold-based GPIO alerts (buzzer/LED above 40°C). Validated accuracy ($\pm 0.5^{\circ}\text{C}$) and 12–24 hour operational stability.

Energy Benefit Analysis for Portland Metro Area

Analyzed financial performance, energy output, and sustainability metrics across multiple wind and solar installations using statistical methods. Built visual dashboards and reports to communicate cost-effectiveness trends and actionable insights.

Green Mind AI PC - Go-to-Market Strategy & Financial Plan

Developed an end-to-end go-to-market strategy for a sustainable AI/ML-powered PC, combining market segmentation, pricing strategy, and dynamic financial modeling (sales forecasts, cash flow, gross margin, ROI). Delivered a 27.81% gross margin and a 3.42-year payback period, balancing product capability with cost trade-offs.

CERTIFICATIONS & AWARDS

Lean Six Sigma White Belt Certification | Project Management Graduate Certificate - Portland State University

Dunder F. Kocaoglu ETM Fellowship - Portland State University (Academic Excellence Award)
